Beneath the Seamark: 6,000 years of an Island's History. Archaeological Investigations at 'Thanet Earth', Kent 2007–2012

Russell Henshaw, James Holman, Robert Masefield, Jon Rady and Jake Weekes

With contributions by Enid Allison, Luke Barber, Lynne Bevan, Chris Butler, John Carrott, Wendy J. Carruthers, Peter Couldrey, John Crowther, Iain Ferris, Alison Foster, Sarah Gearey, Brian Gilmour, Louise Harrison, John Hunter, Rob Ixer, Mandy Jay, Susan Jones, Alison Locker, Malcolm Lyne, Richard Macphail, Barbara McNee, Janet Montgomery, Olaf Nehlich, Maura Pellegrini, Beccy Scott, Peter Searey and Sheila Sweetinburgh

Volume 5: Tables

Canterbury Archaeological Trust Technical Report 2
Canterbury 2019

List of Tables

the second the number of opercula); for remains recorded semi-quantitatively the scale employed was: '+' – few/rare, up to 3 individuals/items; '++' – some/present; 4 to 20, '+++' – many/common; 21 to 50, '++++' – very many/abundant; 51 to 200; and '+++++' – super-abundant, over 200 individuals/items.

Table 200 Plateau 6, inner ring ditch of late Neolithic/early Bronze Age Barrow 1 (G6005) – mollusc remains from residues. Key: Figures are counts of minimum numbers of individuals recorded (for P. elegans the first figure shown is the number of shells and the second the number of opercula); for remains recorded semi-quantitatively the scale employed was: '+' – few/rare, up to 3 individuals/items; '++' – some/present; 4 to 20, '+++' – many/common; 21 to 50, '++++' – very many/abundant; 51 to 200; and '+++++' – super-abundant, over 200 individuals/items.

Table 201 Plateau 6, outer ring ditch of late Neolithic/early Bronze Age Barrow 1 (G6006) – mollusc remains from washovers. Key: Figures are counts of minimum numbers of individuals recorded (for P. elegans the first figure shown is the number of shells and the second the number of opercula); for remains recorded semi-quantitatively the scale employed was: '+' – few/rare, up to 3 individuals/items; '++' – some/present; 4 to 20, '+++' – many/common; 21 to 50, '++++' – very many/abundant; 51 to 200; and '+++++' – super-abundant, over 200 individuals/items.

Table 202 Plateau 6, outer ring ditch of late Neolithic/early Bronze Age Barrow 1 (G6006) – mollusc remains from residues. Key: Figures are counts of minimum numbers of individuals recorded (for P. elegans the first figure shown is the number of shells and the second the number of opercula); for remains recorded semi-quantitatively the scale employed was: '+' – few/rare, up to 3 individuals/items; '++' – some/present; 4 to 20, '+++' – many/common; 21 to 50, '++++' – very many/abundant; 51 to 200; and '+++++' – super-abundant, over 200 individuals/items.

Table 203 Plateau 6, ring ditch of late Neolithic/early Bronze Age Barrow 4 (G6008) – mollusc remains from washovers. Key: Figures are counts of minimum numbers of individuals recorded; for remains recorded semi-quantitatively the scale employed was: '+' – few/rare, up to 3 individuals/items; '++' – some/present; 4 to 20, '+++' – many/common; 21 to 50, '++++' – very many/abundant; 51 to 200; and '+++++' – super-abundant, over 200 individuals/items.

Table 204 Plateau 6, ring ditch of late Neolithic/early Bronze Age Barrow 4 (G6008) – mollusc remains from residues. Key: Figures are counts of minimum numbers of individuals recorded; for remains recorded semi-quantitatively the scale employed was: '+' –

remains recorded semi-quantitatively the scale employed was: '+' – few/rare, up to 3 individuals/items; '++' – some/present; 4 to 20, '+++' – many/common; 21 to 50, '++++' – very many/abundant; 51 to 200; and '+++++' – super-abundant, over 200 individuals/items.

Table 210 Plateau 7, ring ditch of late Neolithic/early Bronze Age Barrow 3 (G7008), all bar final fill (see Table 17) – mollusc remains from residues. Key: Figures are counts of minimum numbers of individuals recorded (for P. elegans the first figure shown is the number of shells and the second the number of opercula); for remains recorded semi-quantitatively the scale employed was: '+' – few/rare, up to 3 individuals/items; '++' – some/present; 4 to 20, '+++' – many/common; 21 to 50, '++++' – very many/abundant; 51 to 200; and '+++++' – super-abundant, over 200 individuals/items.

Table 211 Plateau 7, ring ditch of late Neolithic/early Bronze Age Barrow 3 (G7008), final fill only – mollusc remains from washovers. Key: Figures are counts of minimum numbers of individuals recorded (for P. elegans the first figure shown is the number of shells and the second the number of opercula); for remains recorded semi-quantitatively the scale employed was: '+' – few/rare, up to 3 individuals/items; '++' – some/present; 4 to 20, '+++' – many/common; 21 to 50, '++++' – very many/abundant; 51 to 200; and '+++++' – super-abundant, over 200 individuals/items.

Table 212 Plateau 7, ring ditch of late Neolithic/early Bronze Age Barrow 3 (G7008), final fill only – mollusc remains from residues. Key: Figures are counts of minimum numbers of individuals recorded (for P. elegans the first figure shown is the number of shells and the second the number of opercula); for remains recorded semi-quantitatively the scale employed was: '+' – few/rare, up to 3 individuals/items; '++' – some/present; 4 to 20, '+++' – many/common; 21 to 50, '++++' – very many/abundant; 51 to 200; and '+++++' – super-abundant, over 200 individuals/items.

Table 213 Plateau 8, ring ditch of late Neolithic/early Bronze Age Barrow 6 (G8005) – mollusc remains from washovers. Key: Figures are counts of minimum numbers of individuals recorded (for P. elegans the first figure shown is the number of shells and the second the number of opercula); for remains recorded semi-quantitatively the scale employed was: '+' – few/rare, up to 3 individuals/items; '++' – some/present; 4 to 20, '+++' – many/common; 21 to 50, '++++' – very many/abundant; 51 to 200; and '+++++' – super-abundant, over 200 individuals/items.

Table 214 Plateau 8, ring ditch of late Neolithic/early Bronze Age Barrow 6 (G8005) – mollusc remains from residues. Key: Figures are counts

Please note

Table 32 consists of 12 6-page ‘throw outs’, pp 24–95

Material from TEP6EX07:								
One small bag with hammerscale [BF352]								
6002	[6003]	Cremation	BF 352					
Material from TEP8EX07:								
8883	8885	Middle pitfill	?Late IA	120	33,500	?Fuel ash slag, burnt daub or similar/non magnetic	BF1998: Pale greenish grey lightweight slaggy material + very many small bubbles + some white speckles (6 tubs)	'Iron Age grey'
8883	8885	Middle pitfill	?Late IA	30	400	?Fuel ash slag, burnt daub or similar/non magnetic	BF3237: Pale greenish grey lightweight slaggy material + v many small bubbles + some white speckles (1 bag)	
8884	8885	Lower pitfill	?Late IA	30	470	?Fuel ash slag, burnt daub or similar/non magnetic	BF3238: Pale greenish grey lightweight slaggy material + v many small bubbles + some white speckles (1 bag)	
3647	3648	Pit	?Late IA	155	2,850	?Fuel ash slag, burnt daub or similar/non magnetic	BF1603: Pale greenish grey lightweight slaggy material + v many small bubbles	'Iron Age grey'
12365	12366	Pit		145	1,610	?Fuel ash slag, burnt daub or similar/non magnetic	BF1597: Pale greenish grey lightweight slaggy material + v many small bubbles	'Iron Age grey'
12365	12366	Pit	?Late IA	120	795	?Fuel ash slag, burnt daub or similar/non magnetic	BF1601: Pale greenish grey lightweight slaggy material + v many small bubbles,? one piece with flat 'plastered' surface	'Iron Age grey'
3646	3648	Pit	?Late IA	88	923	?Fuel ash slag, burnt daub or similar/non magnetic	BF1602: Pale greenish grey lightweight slaggy material + v many small bubbles + some white speckles	Iron Age grey'
3997	3999	Ditch	?Late IA	10	161	?Fuel ash slag, burnt daub or similar/non magnetic	BF1605: Pale greenish grey lightweight slaggy material + v many small bubbles, some white speckles (1 frag)	Iron Age grey'

(continued) Context	[Feature]	Context type	Phase/ date	Size mm (max)	Weight (g)	Type of residue/ ?magnetic	Description/comments	Additional comments/ info
3643	3644	Pit	?Late IA	82	339	?Fuel ash slag, burnt daub or similar/non magnetic	BF1604: Pale greenish grey lightweight slaggy material + v many small bubbles, some white speckles (1 frag)	Iron Age grey'
8660	8670	Pit	?Late IA	62	81	?Fuel ash slag, burnt daub or similar/non magnetic	BF1598: Pale greenish grey lightweight slaggy material, + v many small bubbles, some white speckles (2 frags)	Iron Age grey'
12640	12641	Pit	?Late IA	53	55	?Fuel ash slag, burnt daub or similar/non magnetic	BF1609: Pale greenish grey lightweight slaggy material + v many small bubbles, some white speckles (3 frags)	'Iron Age grey'
3642	3644	Pit	?Late IA	40	49	?Fuel ash slag, burnt daub or similar/non magnetic	BF1600: Pale greenish grey lightweight slaggy material + v many small bubbles, some white speckles (9 frags)	'Iron Age grey'
3427	3428	Post hole	?Late IA	90	130	?Fuel ash slag, burnt daub or similar/non magnetic	BF1606: Pale greenish grey lightweight slaggy material + v many small bubbles, some white speckles (7 frags)	'Iron Age grey'
3743	3746	Pit	?Late IA	8.1 cm	98	?Fuel ash slag, burnt daub or similar/non magnetic	BF1612: Pale greenish grey lightweight slaggy material + v many small bubbles, some white speckles (5 frags)	'Iron Age grey'
3470	3471	Ditch (grave)	?Late IA	31	26	?Fuel ash slag, burnt daub or similar/non magnetic	BF1621: Pale greenish grey lightweight slaggy material + v many small bubbles, some white speckles (3 small frags)	Iron Age grey'
8241	8242	Pit (re-cut)	?Late IA	51	50	?Fuel ash slag/non magnetic	BF1616: Med greenish grey, lightweight material (4 small frags)	Fuel ash slag
8490	8490	Pit	?Late IA	57	86	?Fuel ash slag, burnt daub or similar/non magnetic	BF1621: Pale greenish grey lightweight slaggy material + v many small bubbles and some white speckles (2 frags)	Iron Age grey'
8604	8605	Pit	?Late IA	65	63	?Fuel ash slag, burnt daub or similar/non magnetic	BF1627: Pale greenish grey lightweight slaggy material + v many small bubbles and some white speckles (2 frags)	'Iron Age grey'
8635	8642	Pit	?Late IA	62	32	?Fuel ash slag, burnt daub or similar/non magnetic	BF1614: Pale greenish grey lightweight slaggy material + v many small bubbles and some white speckles (1 frag)	'Iron Age grey'
8937	8833	Pit (burial)	?Late IA	52	52	?Fuel ash slag, burnt daub or similar/non magnetic	BF1618: Pale greenish grey lightweight slaggy material + v many small bubbles and some white speckles (2 frags)	'Iron Age grey'
3857	3861	Pit	?Late IA	70	92	?Fuel ash slag, burnt daub or similar/non magnetic	BF1613: Pale greenish grey lightweight slaggy material + v many small bubbles and some white speckles (1 frag)	Iron Age grey'
3638	3557	Pit	?Late IA	46	35	?Fuel ash slag, burnt daub or similar/non magnetic	BF1608: Pale greenish grey lightweight slaggy material + v many small bubbles and some white speckles (2 frags)	'Iron Age grey'
8998	3400	Ditch	?Late IA	65	46	?Fuel ash slag, burnt daub or similar/non magnetic	BF1610: Pale greenish grey lightweight slaggy material + v many small bubbles and some white speckles, 1 fragment with possible wattle impression	'Iron Age grey'
12639	12641	Pit	?Late IA	40	14	?Fuel ash slag, burnt daub or similar/non magnetic	BF1617: Pale greenish grey lightweight slaggy material + v many small bubbles and some white speckles (3 frags)	Iron Age grey'
12590	12595	Pit	?Late IA	42	12	?Fuel ash slag, burnt daub or similar/non magnetic	BF1620: Pale greenish grey lightweight slaggy material + v many small bubbles and some white speckles (1 frag)	'Iron Age grey'
12520	12427	Ditch	?Late IA	25	9	?Smithing slag/ slightly magnetic	BF1625 Lightweight, dark blackish-grey + rust (1 frag)	Iron working slag

(continued) Context	[Feature]	Context type	Phase/ date	Size mm (max)	Weight (g)	Type of residue/ ?magnetic	Description/comments	Additional comments/ info
12814	12815	Pit	?Late IA	19	1	?Fuel ash slag, burnt daub or similar/non magnetic	BF1615: Pale greenish grey lightweight slaggy material + v many small bubbles and some white speckles (1 frag)	'Iron Age grey'
14420	14421	Pit	?Late IA	26	2	?Fuel ash slag, burnt daub or similar/non magnetic	BF1599: Pale greenish grey lightweight slaggy material + v many small bubbles and some white speckles (1 frag)	'Iron Age grey'
8345	8340	Pit	?Late IA	51	109	Probable smithing slag/very magnetic	BF2460: Dense, quite porous, mostly shiny blackish-grey (?magnetite), plus some rusty patches (1 lump)	Ironworking slag
14650	14651	Ditch	?Late IA	38	134	Probable smithing slag/magnetic	BF1626: Medium to dense, dark greyish brown, plus rusty patches, 15 varying sized fragments, plus mostly magnetic grit, ?hammerscale	Ironworking slag
14417	14419	Pit	?Late IA	27	3	Probable fuel ash slag/non-magnetic	BF1622: Quite soft, grey-buff ?semi-fired clay, lightweight but not bubbly (1 fragment)	?Semi-fired clay
8998	3400	Ditch	?Late IA	64	46	?Fuel ash slag, burnt daub or similar/non magnetic	BF1610: Pale greenish grey lightweight slaggy material + v many small bubbles and some white speckles (1 lump)	'Iron Age grey'
3638	3557	Pit	?Late IA	48	37	?Fuel ash slag, burnt daub or similar/non magnetic	BF1608: Pale greenish grey lightweight slaggy material + v many small bubbles and some white speckles (3 frags)	'Iron Age grey'
8666	8670	Pit	?Late IA	32	27	Probable smithing slag/part magnetic	BF1624: Medium density, very dark grey, a few white speckles (2 smallish lumps)	Ironworking slag
3691	3699	Pit	?Late IA	30	11	?Fuel ash slag, burnt daub or similar/non magnetic	BF1619: Pale greenish grey lightweight slaggy material + v many small bubbles and some white speckles (1 frag)	'Iron Age grey'
3777	3778	Ring-ditch	?Late IA	40	4	?Fuel ash slag, burnt daub or similar/non magnetic	BF1623: Pale greenish grey lightweight slaggy material +v many small bubbles and some white speckles (1 frag)	'Iron Age grey'
3485	3486	Pit	?Late IA	29	12	?Fuel ash slag, burnt daub or similar/non magnetic	BF2402: Pale greenish grey lightweight slaggy material + v many small bubbles and some white speckles (1 frag)	Iron Age grey'
8903	8836	Ditch	?Late IA	17	2	?Fuel ash slag, burnt daub or similar/non magnetic	BF1611: Pale greenish grey lightweight slaggy material + v many small bubbles and some white speckles (4 frags)	'Iron Age grey'
12125	12126	Ditch	?Late IA	32	7	? Fuel ash slag	BF1607: Lightweight, buff-dark grey, some bubbles (1 frag)	?fuel ash slag
Plus 110 mostly little bags with small fragments of fuel ash slag (non-magnetic) - 52 bags (238 gm), ?smithing slag (magnetic) - 3 bags (95 gm), mixed smithing slag, iron, hammerscale and fuel ash slag partly magnetic - 12 bags (80 gm), hammerscale - 43 bags (10gm)

Table 33. 2 – Association of forms and decoration.

Surface Treatment Code		
1	Red Painted or slipped	Most of these surfaces are slightly worn and none show clear signs of having been burnished. Some were clearly applied as a slip and on one example (PRN???) it was clearly applied on top of deep incised decoration, leaving a gap between the slip and the bottom of the groove.
2	Slipped	A fine slip without further treatment
3	Polished	Rare sherds had shiney surfaces with no burnish marks.
4	Highly burnished	Highly shiney surfaces which tend to be harder than average and retain clear burnish marks.
5	Burnished	Burnish marks visible.
6	Sm/Part burnished	Surfaces generally smooth but display some areas of burnishing, possibly to reduce projecting clay rather than for visual effect.
7	Roughly burnished	Surfaces generally wiped smooth, occasionally rough, with clear spaced tooled lines of burnishing. This treatment is more common on the interior than exterior.
8	Smooth	Surfaces without striations & no visible signs of burnishing. May include worn burnished surfaces.
9	Slurried - Wiped smooth	Wiped smooth; often with clear slurried layer; sometimes patchy with rougher surface visible below
10	Slurried wiped sm with grass/combing grooves	These marks can very in intensity, sometimes merging into 'combed' decoration
11	broad smooth strips (8 - 15mm) leaving narrow gaps/grooves (2 - 4mm) in between	These strips are usually vertical. The narrow gaps have rough edges and are distinguished from the deliberate cut grooves used as a decorative style on some EIA sherds.
12	Slurried wip sm - broad grooves & pinching on exterior	Tend to be found just below the rim where manufacturing pinch marks are incompletely concealed by slurrying
13	Wiped - (not particularly smooth)	
14	Wiped - broad grooves visible	Rough wiped with broad grooves some with thick slurry
15	Rough wiped	Very irregular surfaces with occasional rough 'comb' grooves (rare) and sometimes flint drag marks
16	Slurried - wip/lt rust	Slurried and wiped, but without applied lumps
17	Light Rusticated	Applied slurry with light light lumps of clay. Includes examples with a layer of fine clay applied while very wet producing delicate raised ridges and sharp points.
18	Moderate Rusticated	Applied slurry with lumps of clay, often flint tempered.
19	Heavy Rusticated	Applied slurry with large lumps (sometimes projecting up to 10mm above the surface) of clay, sometimes flint tempered.
20	rough wiped/twig?	Very roughly wiped leaving 'twig' impressions.

Table 97. Human Burials by Period.

Age Category	Age Range
Perinate	34 weeks – Birth
Infant	1 week – 1 year
Early Childhood	2 – 5 years
Late Childhood	6-12 years
Adolescent	13-17 years
Young Adult	18-25 years
Young Middle Adult	26-35 years
Old Middle Adult	36-45 years
Mature Adult	46+ years
Juvenile	<17 years
Adult	>18 years

Table 98. Age categories and the ranges.

Sex Categories	Defined as:
F	Female
F?	Possible Female
I	Indeterminate
M?	Possible Male
M	Male
U	Unknown

Table 99. Categories for sex assessment.

12	3	G3035	11103	Fill of SFB 2	1		+	
12	8	G8170	12439	Upper fill S12440 of SFB 4	2		+	
12	8	G8170	12440	Upper fill S12440 of SFB 4	1		+	
12	8	G8170	12441	Upper fill S12440 of SFB 4	1		+	
12	8	G8170	12534	Fill S12608 of SFB 4	7		+	
12	8	G8170	12608	Fill S12608 of SFB 4	2	+	+	
12	8	G8170	12604	Fill S12604 of SFB 4	2		+	
12	8	G8170	12609	Fill S12609 of SFB 4	1		+	
14	4	G4061	4679	Basal layer in SFB 45	1		+	
14	5	G5078	15077	Fill of cess tank S15078	1		+	
14	5	G5153	6549	Fill of enclosure ditch S6551	1		+	
14	5	G5178	6592	Fill of enclosure ditch S6593	1		+	
14	6	G6048	6233/34	Fill of chamber S6236 in storage pit	1	+	+	
14	6	G6048	6234	Fill of chamber S6236 in storage pit	1		+	
14	6	G6048	6235	Fill of chamber S6236 in storage pit	2	+	+	
14	6	G6103	16261	Fill of oven S16263 in SFB 65	1		+	
14	6	G6105	16132	Middle fill S16133 of primary fill of SFB 65	1	+		
15	5	G5061	6563	Occupation tread S6563 in SFB 52	1		+	Two thicknesses of shell present
15	5	G5165	15104	Fill of post hole in foundation trench in SFB 53	1		+	
16	1	G1109	917	Fill of oven S919 in SFB 10	1		+	
16	1	G1175	1420	Backfill of SFB 13	1		+	
16	1	G1186	1691	Fill of pit S1692	1		+	
16	1	G1218	13208	Shellfish-rich deposit in storage pit S13295	1	+	+	
16	1	G10083	10292	Fill of pit S10293 at edge of house 10319	1		+	

(continued)

Phase	Plateau	Group	Context	Description of deposits sampled	Number samples with eggshell	>2mm res	Flot	Comments
16	1	G10084	10195	Fill of ditch S10196	1		+	
16	1	G10089	10582	Fill of boundary ditch corner/terminus S10583	1		+	
16	1	G10091	10032	Fill of boundary ditch S10033	1		+	
16	1	G10089	10042	Fill of boundary ditch slot S10043	1		+	
16	1	G10123	10318	Demolition deposit in SFB 77	1	+	+	
16	1	G10125	10166	Occupation/abandonment layer in SFB 78	1		+	
16	2	G2007	2901	Upper fill of circular pit S2903	1		++	
16	2	G2065	9231	Fill of oven structure S9233	1		+	
16	2	G2073	9351	Collapsed oven structure S9349 in SFB 32	1		+	
16	4	G4404	4477	Fill of enclosure ditch S4469	1		+	
16	4	G4064	4777	Rake-out deposit in SFB 43	1		+	
16	5	G5088	5812	Fill of pit S5813	1		+	
16	5	G5106	5556	Surface S5557 in ?erosion hollow	1	+		
16	5	G5128	15163	Fill of pit S15164	1		+	
16	5	G5122	15186	Fill of pit S15188	1	+	+	
20	2	G2063	2856	Secondary fill of ditch segment S2849	1	+		
20	8	G8192	14589	Fill of ditch S14590	1	++	+	
??	1	G114	1722	Fill of post hole or cremation S1723	1		+	
??	1	?	1107	Fill of pit S1108 MISSING FROM RECORDS	1		+	Traces thick eggshell, ?goose
??	1	?	1391	Fill of ditch S1392 NOT GROUPED	1		+	
??	4	?	4341	Fill of hearth CONTEXT VOIDED	1		+	

Table 184. Thanet Earth: Records of avian eggshell from bulk samples.

d – damp ground or waterside taxa
l – wood-associated taxa
g – grain pests
m – moorland taxa
oa – certain outdoor taxa (unable to live and breed within buildings or in accumulations of organic material)
ob – probable outdoor taxa
rt – general (eurytopic) decomposers
rd – dry decomposers
rf – foul decomposers
RT – total decomposers (rd + rf + rt)
p – strongly plant-associated taxa
S – total synanthropes (ss + st + sf)
sf – facultative synanthropes (favoured by man but found in man-made and natural habitats)
ss – strong synanthropes (very rare in natural habitats, generally dependant on human activity for survival)
st – typical synanthropes (typically present in man-made habitats but capable of living in natural situations)
u – uncoded taxa
w – aquatics

Table 185. Ecological groups used in analysis following Kenward et al. (1986) and Kenward (1997) (not all were represented at Thanet Earth).

Species	Food and habitat preferences
Syromastus rhombeus	Dry, sandy or chalky habitats, feeding on spurreys, sandworts and other Caryophyllaceae
Heterogaster urticae	Warm, sunny fields and non-acid wastelands, on nettles (*Urtica*)
Simplocaria semistriata	In moss
Agriotes sp.	In soil below plants
Bruchus rufimanus or *pisorum*	Develops within medium to large legume seeds
Gastrophysa polygoni	On docks (*Rumex*) and knotweeds (*Polygonum*)
Phyllotreta nemorum group	On wild and cultivated Brassicaceae
Phyllotreta cf *nigripes*	On wild and cultivated Brassicaceae
Phyllotreta spp.	Most species live on various Brassicaceae
Chaetocnema arida group	On various grasses, sedges and rushes
Chaetocnema concinna or *picipes*	Usually on members of the knotweed family (Polygonaceae) including *Polygonum* and docks (*Rumex*)
Psylliodes spp.	Found particularly on Brassicaceae
Aspidapion aeneum	Chiefly on common mallow (*Malva sylvestris*), and probably on other mallows (Malvaceae)
Aspidapion spp.	On mallows (Malvaceae)
Ceratapion carduorum	On thistles (*Cirsium* and *Carduus*)
Ceratapion onopordi	In grassland, waste places etc. on a wide variety of Compositae including burdock (*Arctium*), knapweed (*Centaurea*) and thistles (*Carduus*/*Cirsium*)
Diplapion confluens	In waste places, especially on the coast, on mayweeds (*Tripleurospermum* and *Matricaria*), less certainly on *Anthemis*
Taenapion urticarium	On nettles (*Urtica*)
Malvapion malvae	On mallows (Malvaceae), especially common mallow (*Malva sylvestris*)
Oxystoma pomonae	On vetches (*Vicia* and *Lathyrus*)
Oxystoma spp.	On vetches (*Vicia* and *Lathyrus*)
Protapion varipes	On red clover (*Trifolium pratense*), and possibly other clovers
Apionidae spp.	Most species are associated with herbaceous vegetation
Tychius spp.	On leguminous plants (Fabaceae)
Ceutorhynchus contractus	In waste and open places on wild and cultivated Brassicaceae
Ceutorhynchus erysimi	In Britain found exclusively on shepherd's purse (*Capsella bursa-pastoris*), in waste places and on disturbed ground
Ceutorhynchus spp.	On various wild and cultivated Brassicaceae
Hadroplontus litura	Generally on creeping thistle (*Cirsium arvense*)
Microplontus rugulosus	Chiefly on mayweeds (*Matricaria* and *Tripleurospermum*)
Sitona lepidus	In grasslands, waste places and agricultural land, on clovers (*Trifolium*)
Sitona lineatus	Feeds on a wide range of leguminous plants (Fabaceae)
Sitona macularius	Feeds on a wide range of leguminous plants (Fabaceae)
Sitona spp.	Feeds on a wide range of leguminous plants (Fabaceae)
Hypera spp.	On herbaceous plants
Cleonis pigra	Usually associated with creeping thistle (*Cirsium arvense*) in Britain

Table 186. Habitat and food preferences of strongly plant-associated beetles and bugs, information from Cox 2007, Morris (1990; 1997; 2002; 2008; 2012), Southwood and Leston (1959).

TOTAL INDIVIDUALS BEETLES AND BUGS	534	1469	226	287	313	275	643	376
Concentration of beetles and bugs per litre	76	147	32	287	52	55	257	188

Table 187. Insects and other invertebrates recorded from the samples. Ecological codes are shown in square brackets, see Table 1. Nomenclature follows Duff 2012 for beetles (Coleoptera), and the British Bugs Website (2012) for bugs (Hemiptera: Heteroptera). Abundance of invertebrates other than adult beetles and bugs has been estimated on a three-point scale as: + present, ++ common, +++ abundant. Sample volumes marked with an asterix (*) have been adjusted because only part of flots were examined for insect remains.

Table 196. Checklist of terrestrial mollusc taxa recorded and partial identification levels with their allocated ecological coding. Nomenclature and taxonomic order of presentation follows Kerney (1999). Ecological codes (ecode) are as follows: ap – anthrophobic; b – burrowing; c – catholic; mh – marsh; od – open, dry habitats (including short-turf grassland); r – rocks/scree; s – synanthropic; sdc – shade/disturbance/clearance; wl – woodland indicators; ws – shade-loving (woodland/scrub/leaf litter/wet grassland).

Key: Figures are counts of minimum numbers of individuals recorded (for P. elegans the first figure shown is the number of shells and the second the number of opercula); for remains recorded semi-quantitatively the scale employed was: '+' – few/rare, up to 3 individuals/items; '++' – some/present; 4 to 20, '+++' – many/common; 21 to 50, '++++' – very many/abundant; 51 to 200; and '+++++' – super-abundant, over 200 individuals/items.

Microfacies type (MFT)/ Soil microfabric type (SMT)	Sample No.	Depth (relative depth) Soil Micromorphology (SM)	Preliminary Interpretation and Comments
MFT B2/ SMT 1a, 1b, 4a	430	0-75 mm SM: heterogeneous with dominant SMT 1a and 1b, with frequent SMT 4a; *Microstructure*: loose crumb and fine subangular blocky; 55%, mainly simple packing voids and open vughs; *Coarse Mineral*: as below; with few chalk, increasing upwards to dominant (20mm); *Coarse Organic and Anthropogenic*: trace amounts of fine charcoal; occasional often humic-stained landsnail shell fragments and biogenic calcite (root traces); *Fine Fabric*: as below; *Pedofeatures*: *Fabric*: many broad burrows; occasional very broad (7mm) burrows; *Excrements*: very abundant broad excrements.	6021 Loose, burrow mixed crumb (humic topsoil) and fine subangular blocky (chalky subsoil) soil, with chalk stones increase from few to dominant upwards. *Mixed, loose turf layer buried by chalk dump.*
MFT B1/ SMT 1a and 1b	431	0-5(15)mm (6028) Very dominant SMT 1a and 1b, with few chalk stones	6028 *Turf layer*
MFT C2/ SMT 4a, 3a (1a and 1b)		5(15)-70(75) mm (6029) SM: moderately heterogeneous with calcareous subsoils SMT 4a and frequent 3a, and few humic SMT 1a and 1b; *Microstructure*: very poor coarse subangular blocky, 35% voids, poorly accommodated planar voids and packing voids; *Coarse Mineral*: as below; *Coarse Organic and Anthropogenic*: *Fine Fabric*: as below; *Pedofeatures*: abundant needle crystal infills and coatings; *Fabric*: many broad burrows; *Excrements*: very abundant broad excrements.	6029 Subsoil chalky soil and calcareous drift subsoil, with few included crumbs of humic silty soil. *Subsoil layer*
MFT B1/ SMT 1a and 1b		70(75)-75 mm (6030) As 6030 below, but more compact (40% voids).	6030 *Turf layer*
MFT C2/ SMT 4a (3a, 1a and 1b)	M432	0-40 mm SM: Moderately heterogeneous, with very dominant SMT 4a (3a) and few SMT 1a and 1b; *Microstructure*: as below, with fine subangular blocky, 60% voids; *Coarse Mineral*: as M434, with examples of fine gravel and sand-size ironstone; *Coarse Organic and Anthropogenic*: as below, with 250μm charcoal example; *Fine Fabric*: as below; *Pedofeatures*: as below.	6029 Loose fragmented crumb and fine subangular blocky peds of chalky subsoil, with few humic soil crumbs. *Layer of loose chalky subsoil.*
MFT B2/ SMT 1a, 1b, with 4a		40-75 mm SM: Moderately heterogeneous, with very dominant SMT 1a and 1b, and frequent SMT 4a; *Microstructure*: loose, structureless, crumbs 55% voids; packing voids; *Coarse Mineral*: as M434m but with only few chalk gravel; *Coarse Organic and Anthropogenic*: trace amounts of fine charcoal; many biogenic calcite; example of sand-size weakly rubefied flint; *Fine Fabric*: as below; *Pedofeatures*: *Fabric*: many broad burrows (loose sample); *Excrements*: very abundant broad organo-mineral excrements.	6030 Loose humic soil dominated (as crumbs), with crumb/peds from 6029 loosely mixed in. *Fragmented humic turf layer.*
MFT C1/ 4a, 3a, 1a (1b)	M433	0-10 (6030 – see above – M432) 10-40 mm SM: very heterogeneous but fragmented, with common SMT 4a and 3a, frequent 1a and 1b – sometimes all cemented together; *Microstructure*: massive (with included subangular blocky, and also semi-layered); intrapedal 20%, fine fissures and channels (40%); *Coarse Mineral*: as M434; *Coarse Organic and Anthropogenic*: trace amounts of charcoal (max 1.5mm), occasional landsnail shell and biogenic calcite, rare earthworm granules; *Fine Fabric*: as M434, but here SMT 3a does not contain plant fragments; very abundant root traces; *Pedofeatures*: *Crystalline*: very abundant micritic calcite (and latterly needle crystal) infills of packing voids between coarse soil clasts, and associated with root traces; *Fabric* and *Excrements*: as below, both in cemented and uncemented parts.	6030 (as above) 6031 Micritic calcite and needle calcite-cemented, semi-layered mixture of calcareous silt, chalky subsoil and topsoil humic silty soil clasts, some with many very fine charcoal. Trace amounts of charcoal, including 1.5mm-size fragment. Partially cemented 'planar voids' between clasts commonly show fine root traces and associated needle calcite infills and coatings. Areas of this layer also fragmented. *Dumped material from possibly trampled/ compacted surface – which became cemented and rooted for a while, before being deposited here.*

(continued)

Microfacies type (MFT)/ Soil microfabric type (SMT)	Sample No.	Depth (relative depth) Soil Micromorphology (SM)	Preliminary Interpretation and Comments
MFT B1/ 1b, 4a (1a, 2a, 3a)		40-75mm 6032 (as 6032 in M434, with frequent SMT 4a, as coarse (10mm) clasts).	6032 As below. Probable mixed turf and chalk layer.
MFT B1/ SMT 1a, 1b, 3a (2a, 4a)	M434	0-35 mm SM: very heterogeneous, with common SMT 1a, 1b, and 3a, and very few SMT 2a; *Microstructure*: structureless (two ~5mm thick humic soil layers between 7mm-thick chalk gravel layers), 45% voids, open and closed vughs, and mainly simple and complex packing voids; *Coarse Mineral*: as below, with flint (25+mm); *Coarse Organic and Anthropogenic*: rare fine charcoal, trace of rubefied grains, occasional amorphous organic matter (e.g., possible fine reddish brown dung fragments?) and fine root (other plant part) fragments (some pale and yellowish, others dark-browned) and rare landsnail (including 1.3mm-size shell); trace of spores; occasional biogenic calcite (fragmented root pseudomorphs); trace amount of earthworm granules; *Fine Fabric*: SMT 1a: blackish brown (PPL), isotropic (close porphyric, undifferentiated b-fabric, XPL), blackish brown (OIL), very abundant amorphous OM and occasional very fine charcoal; SMT 1b: darkish brown (PPL), very low interference colours (close porphyric, sparse crystallitic, XPL), darkish brown (OIL), very abundant amorphous OM and occasional very fine charcoal; SMT 3a (as broadly burrowed in soil): pale cloudy brownish grey (PPL), high interference colours (close porphyric, crystallitic b-fabric, XPL), faintly brownish grey (OIL), very weakly humic, but chief location of browned and yellowed plant fragments and amorphous OM fragments, some containing pollen/spores; very fine charcoal is present; *Pedofeatures*: as, occasional needle calcite, very abundant broad excrements.	6032 Loose, possibly thinly (5mm) layered humic silty soil (mainly weakly calcareous with some decalcified) and chalk gravel/small stones. Much biogenic calcite which is partially fragmented root pseudomorphs, with rare landsnail fragments, and trace amount of earthworm granules; some chalk is coated with needle calcite. Broadly burrowed in calcareous silt, contains anomalously high amounts of yellowed and brown root and other plant fragments, and amorphous organic matter which includes pollen/spores. Very fine charcoal is present. *Possible chalk turf layers, with rendzina topsoils formed in loess drift overlying chalk. Burrowed calcareous silt subsoil, which contains humifying plant material (including possible dung traces) and amorphous OM containing pollen/spores, is enigmatic.*
MFT A1/ SMT 4a (1a, 1b, 2a and 3a)		Strongly mixed, loose soil boundary. 35-75 mm SM: very heterogeneous, with common SMT 4a, frequent SMT 1a and 1b, and very few SMT 2a and 3a; *Microstructure*: structureless, 40% voids, open and closed vughs, simple and complex packing voids; *Coarse Mineral*: C:F (Coarse:Fine limit at 10μm), 80:20; very poorly sorted with medium to coarse silt-size, and fine sand-size quartz, chalk and calcite/shell, with very few glauconite, flint and mica, sand-size chalk and fossils, with very dominant angular chalk gravel and small stones (30mm); *Coarse Organic and Anthropogenic*: rare fine charcoal, trace of rubefied grains, rare amorphous organic matter and fine root fragments and landsnail; *Fine Fabric*: SMT 4a: cloudy grey (PPL), high interference colours (close porphyric, b-fabric, XPL), grey (OIL); SMT 2a: speckled and dotted dark reddish brown (PPL), low interference colours (close porphyric, sparse crystallitic, XPL), pale reddish brown (OIL), humic with amorphous OM and abundant very fine charcoal; *Pedofeatures*: *Crystalline*: abundant needle calcite ('lublinite') infills and coatings; rare biogenic sparite (root pseudomorphs?); *Fabric*: abundant broad (2mm) burrows; *Excrements*: many broad organo-mineral excrements (SMTs 1a, 1b and 2a).	6033 Coarsely mixed loose chalk (sand, gravel and angular small stones), chalky subsoil (coarse silt and fine sand embedded in micritic soil), and very few humic soil peds, which contain very fine charcoal. Root traces are present alongside weak cementation by needle calcite ('lublinite'). *Loose deposit of coarse chalk, chalky soil and earthworm-mixed humic soil peds from above.*
